Teachers wanting to engage students in geographical thinking through critical inquiry will find this book a very welcome resource. It provides a solid framework of concepts, examples, and questions that clearly develop what critical inquiry means in geographical problem-solving.

*Teaching About Geographical Thinking* is organized around six interrelated concepts central to geographical problem-solving:

- geographical importance
- patterns and trends
- sense of place
- evidence and interpretation
- interactions and associations
- geographical value judgments

Each concept is discussed and illustrated with examples, questions, and criteria to guide the interrogation and assessment of geographic problems. Most of the examples draw upon current and pressing geographic problems in Canada. The examples are followed by concise discussions of the portal concept’s key dimensions, and suggestions for practical teaching applications across the curriculum.

Jointly published by The Royal Canadian Geographical Society and The Critical Thinking Consortium.

*It is a splendid and significant piece of work that shows why geographical education is important. While there are several good methodological texts for B.Ed. programs, I know of none that match this book in clarity, comprehensiveness and interrelatedness, intellectual rigour, and depth. The six portals are spot on, very clear, and great organizers for the content. The book will contribute greatly to sound and exciting teaching of geography.*

Stuart Semple, Ed.D., Mount Allison, University

*Every teacher of geography could benefit from reading and applying the principles laid out in this publication.*

Beth Dye, Chair, Canadian Council for Geographic Education
Teaching about Geographical Thinking
